

Lab 6 Georeferencing**Name:**

Upload the following files to your instructor:

(15) "YourName_1959_Aerial_Photo_GIS" .tif

(22) "Your name_1980_SFEI_GIS" .tif

(23) "Your name_1880_SFEI_GIS" .tif

Question 1: Why should you have your GCPs distributed across the warp image and not confined to one corner or arranged along a line?

Question 2: Why did we georeference the 1980 map to the 2003 ASTER image first – and then georeference the 1880 map to the georeferenced 1980 map. (Hint: think about dates of the three files and look at the features (roads and railroads) common to the two SFEI maps).
